

Add Powerful, Worry-Free eCatalogs, Estimating and Part Sourcing to Your Service Center

Introducing Integrated Service Estimator by Activant

Integrated Service Estimator (ISE) is an integrated Web-based estimating tool that provides a robust estimating solution for service chains. Designed as an add-on module, ISE can be seamlessly integrated with the TreadX® and TireMaster® systems. ISE provides access to Activant's world-class parts, labor and jobs databases to ensure the right service job is quoted accurately and efficiently.

State-of-the-Art Sourcing and eCatalog Means No Paper Catalogs or Phone Calls

- Lookup parts, labor or jobs quickly via categories and groups, descriptions or job codes
- Send inquiries and parts orders from multiple local suppliers seamlessly via the Internet
- Access Activant's leading aftermarket parts database, a comprehensive jobs database and the Mitchell 1® integrated labor guide

Fully Integrated with TreadX and TireMaster

- One keystroke from your work order screen launches a mechanical estimate with the customer, vehicle, user and store information already populated
- All parts, labor and pricing information generated in ISE is automatically transferred to the ASA system where the invoice can be completed

Worry-Free Maintenance and Updating

- Hosted and maintained in Activant's state-of-the-art data center in Austin, Texas
- All software and data updates are performed automatically

Product Features

- **100% Web-based** application is intuitive and easy to use
- **Activant PartExpert®** - Industry leading aftermarket parts database with 4.7 million parts from 3,000 manufacturers
- **Cover-to-Cover™** - Catalog enhancement that lets users instantly view a wealth of manufacturer data directly from the parts lookup screen, including product images, specifications, OE references, installation instructions, warranty information, technical service bulletins (TSBs), material safety data sheets (MSDSs), and much more

- **LaborExpert®** - Aftermarket flat rate labor guide based on the Mitchell 1 Mechanical Estimating Guide
- **EZWrite™ Jobs** - Activant's database of popular repair and maintenance services mapped to parts and labor operations allows you to quickly locate the parts and labor for a particular repair operation in just a few seconds
- **Custom Jobs** - Service chains can create their own jobs or services to match what they currently offer. Jobs can be mapped to parts or labor from the Activant catalog, custom parts or labor, and fluids such as motor oil, antifreeze, etc.
- **Integrated Ordering** - provides access to Activant's vast network of suppliers
- **Custom Parts or Labor** - Add custom parts or labor to an estimate or to a particular job on the estimate
- **Individual Shop and Chain-Wide Administration** - System administrators can create and manage multiple locations with one login. Each individual location can have its own settings such as labor rates and pricing matrix.

Full Access to Additional Part & Vehicle Information

- **InterChange®** - An expanded cross-reference parts database for PartExpert.
 - Access over 16,000,000 up-to-date listings for both Original Equipment Manufacturer (OEM) to aftermarket and aftermarket to aftermarket interchanges
 - Expand coverage to include passenger car, light truck, medium or heavy-duty truck, small engine, marine, motorcycle, agricultural, industrial, and recreational applications
- **Vehicle specifications** - Fluid types, fluid capacities, torque specifications, fitting and plug sizes, spark plug gaps, ball joint tolerances, rotor discard measurement, etc.
- **Service Intervals Plus™** - A database of OEM recommended scheduled maintenance intervals
 - Access OEM service intervals for both routine and severe service maintenance schedules
 - Sell additional, high-margin maintenance service
- **Vehicle Identification Number (VIN)** - An advanced VIN decoding technology resolves year, make, model, engine and most vehicle-specific characteristics including: body style, transmission, 2WD/4WD/AWD, ABS, etc. eliminating the guesswork and extra time involved in traditional, application-style look-ups
