- APC 350 Power Backup
- Oki® Laser Printer 4600 & 4600N
- Oki 420 Dot Matrix Printer
- Computer Cash Drawer

Warranties: All warranties are manufacturer's warranties. Next business day on-site warranty service is provided for Dell computers. The customer must be willing to participate in hardware diagnostics before service can be rendered. On-site hardware warranties are the responsibility of the manufacturer and warranty company.

Notes: Each store requires one server for backup and data security purposes. We recommend using a standalone machine as the store server. However, if there is only one workstation at a store, it must be the server. In some cases involving multiple stores, an upgrade in server equipment is required. TireMaster requires one laser printer* and Oki 420, 320, or 320 Turbo printers, if dot matrix printers are used. The computer operating system must be Microsoft Windows® XP Professional, Windows Vista® Business/Ultimate, Windows 7 Professional/Ultimate/Enterprise, Windows 2003 Server or Windows 2008 Server (32-bit versions only).**

Internet Connection: An Internet connection accessible by the server is required in each store for online support. Internet connectivity is also required to maximize TireMaster's automated features.

Cabling: Interior network cabling must be completed prior to installation of the system. Generally, local telephone companies will perform this installation. While we can advise your local contractor about category 5, 8-wire, twisted pair 10 base-T cabling, ASA is not responsible for performing cabling. Additional telephone lines might be required, depending on the system purchased.

Recommendations might vary due to size, scope, and demands on the system. Trends in the computer industry require that recommendations change often, possibly without notice.

* HP 1200 Series printers are *not* compatible with pre-printed forms.

** TireMaster is *not* compatible with 64-bit operating systems.
