

TireMaster System Requirements

To run TireMaster, you need to meet or exceed the following minimum system requirements:

- ◆ **Processor:** 2 gigahertz (GHz) or faster
- ◆ **Memory:** 1 gigabyte (GB) of available RAM
Note: This amount of RAM needs to be available *after* TireMaster has been installed.
- ◆ **Hard Disk:** 20 GB of available hard disk space
- ◆ **Drive:** CD-ROM or DVD drive
- ◆ **Display:** VGA or high-resolution monitor
- ◆ **Peripherals:** Keyboard, Microsoft® mouse or a compatible pointing device
- ◆ **Operating System:** Microsoft Windows® XP Professional, Windows Vista® Business/Ultimate, Windows 7 Professional/Ultimate/Enterprise, Windows 2003 Server or Windows 2008 Server (32-bit versions only)¹
- ◆ **Connectivity:** Internet connection and an e-mail address, capable of sending files as large as 2 megabytes (MB)

Additional Requirements

- ◆ One server for backup and data security purposes (at each store). We recommend using a standalone machine as the store server. However, if there is only one workstation at a store, it must be the server.
- ◆ One laser printer² and OKI® 420, 320, or 320 Turbo printers, if dot matrix printers are used.
Note: You might also need to install Microsoft Excel® (with Microsoft Query loaded) or a similar program such as Calc, the OpenOffice spreadsheet. These applications are necessary for our Client Services team to perform database work on your system.

1. TireMaster is *not* compatible with 64-bit operating systems.
2. HP 1200 Series printers are not compatible with pre-printed forms.
