

## **BASys Manufacturing Interface**

Automatically interface your ASA business management application with the BASys Manufacturing retread management system, eliminating manual data transfer and streamlining billing, accounting, and inventory tracking!

### ***How will it work for you?***

During a normal business day, casings come into the plant and are scanned into BASys Manufacturing. With this interface, completed orders of finished tires move seamlessly from BASys Manufacturing to your ASA application, transferring your inventory to a selling store, billing the customer directly or applying a casing credit.

### ***Banking tires is also a breeze!***

Completed tires are accounted for in your customer's "bank." When the customer wants them, the BASys Manufacturing application scans them, and automatically tells your ASA business management application to bill the customer. Your ASA software then creates an invoice that provides line item detail of tires, adjustments, casing credits, and scrap casings. At the end of the day, the BASys Manufacturing system is updated with all billed orders.

*Once finished, you will still be able to review your orders in your ASA application by:*

- Customer Number
- Delivery Receipt Number
- Order Date
- Invoice Date
- Cap Item Number
- Order Number

### ***Maintenance is simple, even with two systems.***

Built-in cross reference tables seamlessly map each system's location and customer records. New retread customer records are sent from your ASA application to the BASys Manufacturing system, always ensuring data integrity. Any inconsistencies between records in the two systems are automatically recognized, allowing you to correct them on the fly – and before they become a problem for your business.

*Your BASys Manufacturing reporting is further amplified through your ASA application with multiple reporting options:*

- Inventory Receipts Showing Finished Goods Receipts by Date
- Inventory Receipts Showing Raw Material Usage by Date
- Import Journal Showing Work Order Billing by Date

Increase your productivity and decrease your costs by bringing this seamless integration into your business today! To order the BASys Manufacturing Interface, call an ASA sales representative at 800-657-6409.

**BASys Manufacturing Interface**

***"I thought running two systems would be a hassle - it's not! With this interface, I've streamlined accounting, billing, and inventory; It's seamless!"***

The BASys Data Channel Interface lets Bandag dealers submit credits for National Account delivery receipts electronically. With this interface, you can also download approved claims into your ASA system for processing. Because it lets you move information between Bandag's Data Channel system and your ASA business management application, this utility can help you save more than just time...

*This exciting new interface gives you the ability to:*

- Input information such as the cause of failure and the retread DOT at point of sale
- Download inventory and pricing information for fleet contracts
- Generate reports describing fleet customer and price information changes
- Generate reports that indicate whether information in the Bandag pricing file conflicts with fleet contracts set up in your ASA business management application

When reconciling Bandag claims, the National Account Reconciliation Report includes the status of files that have been submitted to Bandag. This gives you a record of your transmissions and indicates whether they were successfully processed.

The latest version of the Data Channel Interface is compatible with Bandag Data Channel 3.0 and BASys product specifications.

Increase your productivity and decrease your costs by bringing this seamless integration into your business today! ASA continues to work with Bandag to bring dealers products to help them keep customers for life. To order the Data Channel Interface, call an ASA sales representative at 800-657-6409.
